

Did you know there is a “silent killer” in the community?

Hepatitis C is just 1 of 3 of the most common viruses that attack your liver.
Do you know your Hepatitis ABCs?

	Hepatitis A	Hepatitis B	Hepatitis C
How is it transmitted?	Eating food or drinking water that has human waste in it. It happens more than you would think.	Most often by having unsafe sex (not using a condom). Also through contact with someone else's infected blood*. Moms with hepatitis B can give it to their babies during birth.	Most often through contact with someone else's infected blood*, or by having unsafe sex (not using a condom).
Can it kill me?	Rare.	Yes.	Yes.
How long can it last?	Up to 6 months.	Your whole life.	Your whole life.
How does it hurt me?	Attacks your liver.	Attacks your liver.	Attacks your liver.
What are the symptoms?	Can feel like the flu.	Usually none. Can feel like the flu.	Usually none. Can feel like the flu.
Is there a vaccine?	✓ YES	✓ YES	 NO
How can I prevent it?	GET THE SHOT. 	GET THE SHOT. 	Avoid contact with anything that might have blood on it. Use a condom when having sex. *
How do I know if I already have the virus?	Blood test	Blood Test	Blood Test

*Sharing needles, toothbrushes, nail clippers, razors, cottons, cookers, cocaine straws, etc. can all transmit HEPATITIS B and HEPATITIS C!
